12 Mo Rent Growth

2.8%

In the third quarter of 2023, the San Francisco industrial Market is characterized by rising vacancy and moderating rent growth, as an influx of new flex space encounters slowing demand.

In recent years the booming life sciences sector led to a surge in demand by biotech companies for R&D space. Developers have responded with the construction of new facilities, primarily in the South San Francisco Submarket, which already accounts for a quarter of the market's industrial space and 50% of the total construction pipeline. In 2023, many of these new projects are being delivered into a market where demand has since pulled back, and leasing is slow for spaces that were neither build-to-suit nor pre-leased.

In contrast, the inventory of logistics and distribution space in San Francisco has been on a steady downward trend for many years, as old industrial sites were demolished or repositioned for other uses. The San Francisco Peninsula is mostly built out and land is expensive.

With continued new development, flex properties now account for around 30% of the San Francisco industrial market, a much higher share than in most other markets.

Economic headwinds have slowed demand for industrial

space. Higher interest rates and banking turmoil have slashed venture capital funding in the biotech sector, while the slowing economy has also caused many logistics property users to decrease leasing activity. Total industrial leasing in the first half of 2023 was the second lowest volume since the great recession, and activity remains weak in the third quarter.

Vacancy has increased, and currently stands at 8.7%. The increase is driven by flex space, where vacancy has increased to 16.1%, whereas vacancy in the logistics sector remains close to its long-term average, at 4.9%.

Reflecting high land and operating costs, industrial rents, at \$27.00/SF, are the highest in the nation. However, the rate of growth in rent is one of the lowest. In the year to 2023q3, rents grew by 2.8%, compared to 8.0% nationally. The large pipeline of construction projects is projected to result in higher flex vacancy and limited scope for rent growth in the quarters ahead.

The investment market is showing signs of a sharp slowdown after two years of elevated activity. High interest rates and investor caution have dampened demand and resulted in total sales volume of just \$98 million so far in 2023. By comparison, annual sales volume peaked at \$2.2 billion in early 2022.

Deliveries SF	2M	499,001	1,174,149	1,524,424	2021 Q1	7,592	2016 Q2
Rent Growth	2.8%	3.2%	3.6%	10.9%	1998 Q1	-4.7%	2002 Q3
Sales Volume	\$874M	\$645.4M	N/A	\$2.5B	2021 Q3	\$99.1M	2010 Q1

The slowdown in leasing activity that began in the second half of 2022 has continued into 2023. Outside of the pandemic slowdown in 2020, total industrial leasing volume in both 23Q1 and 23Q2 was the lowest since the great recession, and leasing has remained slow in the third quarter.

The leasing slowdown has come about as higher interest rates and economic uncertainty reduced demand for industrial space. Moreover, the demand from biotech companies for R&D space has diminished as venture capital funding has dried up. Coming at a time that coincides with a spike in the delivery of newly constructed flex R&D space, the result has been an increase in vacancy.

Flex vacancy has increased by 6.6% in the past year and stands at 16.1% in the third quarter of 2023. By comparison, logistics space vacancy remains close to its long-term average at 4.9%. Overall market vacancy ticked up to its current rate of 8.7%.

Availability in the flex sector has also increased and is currently 25.5%. This figure reflects both the availability of space in speculative projects under construction and an increase in sublet space. For example, the 350,000 SF 700 Gateway Blvd. in South San Francisco, which completed in 2022, has over 200,000 SF available. Also in South San Francisco, Arsenal Biosciences and Standard BioTools have added a total of 120,000 SF of sublease space at Genesis Tower 2.

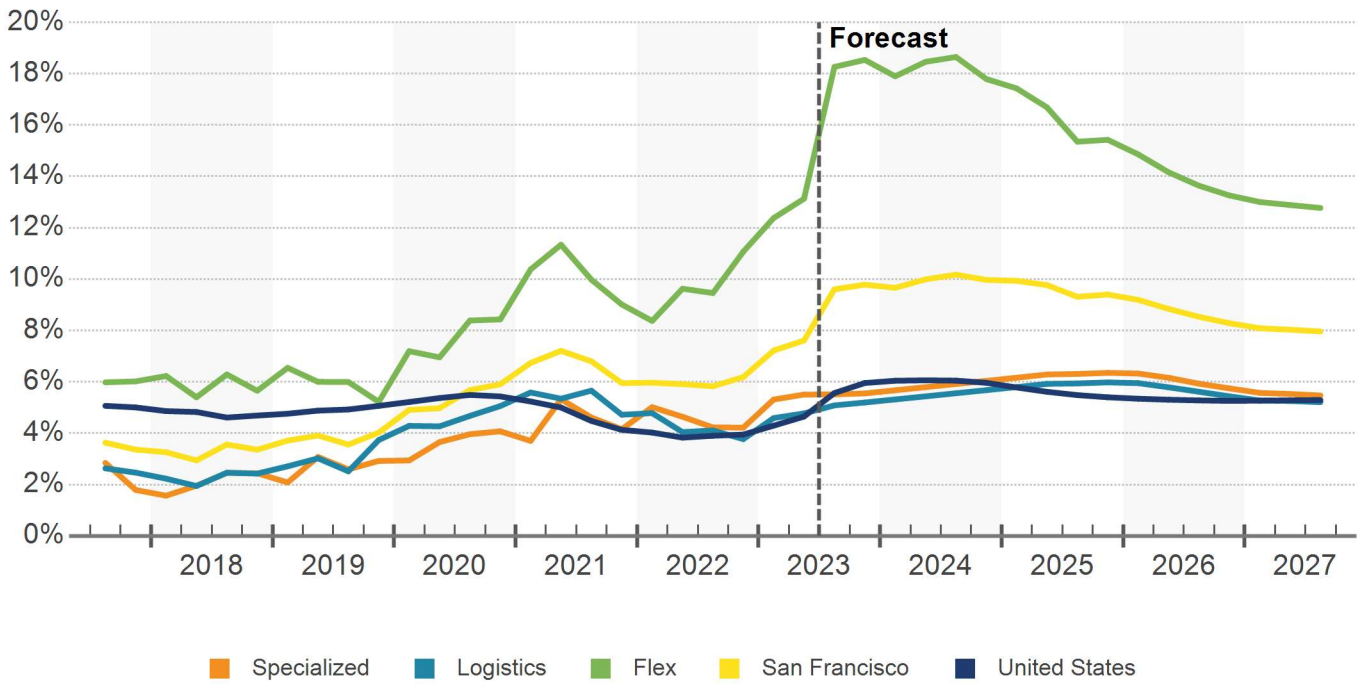

One of the largest new leases was signed by Ideaya, which leased 44,000 SF of biotech space at DivcoWest's Sierra Point in June 2023. In the logistics segment, TriMark leased a 120,000 SF distribution warehouse in Brisbane. The seven year lease has a starting monthly rent of \$1.80/SF.

Continued economic uncertainty and deliveries of speculative flex space in the months ahead may cause vacancy to rise further in the coming quarters. Of the 4.4 million SF currently under construction, 3.5 million SF is available.

*Renewal

Rents levels for industrial properties in San Francisco are the highest in the nation. A tight market and competition with other land uses for scarce space have kept rents high and discouraged the use of sites for large scale industrial facilities. The average asking rate is \$27.00/SF, which compares to the national average of \$11.60/SF. Flex rent averages \$37.00/SF, and logistics space goes for \$22.00/SF. These rates are approximately twice the national average.

In recent years, however, the rate of rent growth has been much lower in San Francisco than other markets. The spike in industrial rents in early 2022 that saw an average annual increase across the nation of 11.6%,

registered just 6.6% at its peak in San Francisco.

As of 2023q3, asking rents in San Francisco are 2.8% higher than they were a year ago. This is below the national average increase of 8.0%. Flex properties saw the sharpest slowdown in rent growth over the past two years and are trailing the metro average. Asking rents gained just 1.3% over the past year, with growth constrained by the elevated availability levels in this sector. CoStar's base case forecast projects that rent growth will remain low through the next year before increasing moderately towards the long term average at around 5% per year.

MARKET RENT GROWTH (YOY)

MARKET RENT PER SQUARE FEET

San Francisco's industrial market is seeing a historically high level of development, with over 4 million SF of space currently under construction. These projects are all R&D flex space aimed at the life science/biotech industry. This sector has seen high levels of growth and occupier demand in recent years, but as of the third quarter of 2023, tenant expansion activity has slowed sharply on the back of high interest rates and recessionary challenges.

The geographic focus for new flex space is the South San Francisco Submarket. However, new construction is disbursed throughout the metro area, with sizable projects also taking shape in the southern part of Downtown San Francisco and several Peninsula employment centers, including Millbrae, San Carlos, Belmont, and Redwood City.

In South San Francisco, new buildings have been completed in the past year for Genentech, InterVenn, and Cytokinetics. Kilroy Realty's Oyster Point development also continues to deliver new life science

and R&D space. Three Phase II buildings totaling 860,000 SF are under construction and set to deliver in 2023. Phases III and IV are planned to deliver another 1 million SF over the next five years.

In addition to these new construction projects, there are a handful of conversion projects, typically involving older office, retail, or industrial buildings being redeveloped as flex space. One example is the Shops at Tanforan in San Bruno. This 50-year-old mall, previously anchored by JCPenney and Sears, was sold in 22Q1 for \$82.7 million, or \$142/SF. The buyer was Alexandria Real Estate, which plans to develop a biotechnology campus on the site, adding life science flex space and a mix of other uses.

In another example, BioMed Realty is planning to transform part of the old Oracle campus at Island Park in Foster City for biotech users. Two buildings of 90,000 SF each are currently being marketed as spec lab suites, while the owner is pursuing entitlements to convert a further 630,000 SF at the campus.

Investment demand for San Francisco's industrial and flex properties has slowed in the past six months, reflecting the negative impact on investor sentiment from rising interest rates and economic uncertainty.

As of the third quarter of 2023 only 25 transactions have closed since the start of the year, compared to the long

term annual average of around 200 transactions. Most of the properties that sold in this time period were smaller 2 Star industrial properties, bought by owner-users, local private investors or developers. Individual sale prices were generally below \$15 million and the average transaction price was just over \$470/SF.

From Gold Rush to Dot-Com, the San Francisco economy has a long history of boom followed by bust. And the current iteration of this cycle may prove to be the most dramatic. The tech boom of the 2010s, fed by the world's appetite for new mobile technologies, brought tremendous demand from expanding tech companies for office space, and a growing workforce that needed housing. Real estate prices increased rapidly to among the highest in the nation, prompting a construction boom across the city. In 2020, the COVID-19 pandemic abruptly halted that pattern. Tech companies quickly adapted to remote working, while their workforce left the city in large numbers. Three years on, in the disrupted real estate markets, demand remains low and prices are adjusting.

San Francisco is one of three major markets—the others being the East Bay and San Jose—that together, comprise most of the San Francisco Bay Area. The Bay Area is one of the largest metropolitan areas in the U.S., with a total population of 9.5 million, and is a major gateway city and generator of economic growth. The San Francisco market comprises San Francisco and San Mateo counties and is home to 1.6 million people. The major center for business activity is the Financial District in Downtown San Francisco. Major industries include information and communications technology, professional and business services, and tourism.

The COVID-19 pandemic triggered an economic downturn that disrupted San Francisco's core economic base and impacted the performance of key commercial real estate sectors. Most notably, the slow pace of a return to in-office working in Downtown San Francisco has impacted the viability and value of downtown office properties and had negative impacts on local businesses. Data from office key card usage and transit activity on BART show that San Francisco has one of the lowest

return-to-office levels of any major market in the nation. Reflecting this fall in activity, office vacancy levels have escalated, particularly in the Financial District and South Financial District, which are the core submarkets that contain the bulk of San Francisco's 4 & 5 Star office space.

The high cost of living led to a decline in San Francisco's population prior to 2020, but the pandemic accelerated this trend, with the population falling by -5.1% at the height of the pandemic. Recently, some of these losses have been recovered. Nevertheless, the metro still has -110,000 fewer people than it did five years ago.

Total employment has recovered and is now slightly ahead of where it was pre-pandemic. However, employment growth has been constrained by outward migration and a fall in the labor market participation rate. After falling to a 10-year low of 2.3% in 2022, the unemployment rate has increased to 2.9% in 2023q3. Layoffs in the technology sector have improved liquidity in the tight employment market but have also contributed to some weakening of demand in residential and retail markets.

Innovation in life sciences and biotechnology has driven growth in areas such as South San Francisco, and prompted developers to move forward with a range of lab space, R&D space, and residential construction projects. That said, delivery of life science projects is occurring at a time when businesses are cutting back on capital commitments, as high interest rates impact company valuations and dampen interest from venture capital and other investors.

Future tech growth in new areas such as AI is expected to remain focused in the Bay Area, and is expected to drive the economy forward over the coming years.

(1) Completed transaction data is based on actual arms-length sales transactions and levels are dependent on the mix of what happened to sell in the period.

(2) Market price trends data is based on the estimated price movement of all properties in the market, informed by actual transactions that have occurred.
